### VISUAL SFA

### SALES FORCE AUTOMATION

Our web-based solution streamlines the order entry process whilst providing secure, real-time visibility of order information and production status from any internet connection.

Customers (if needed) too can stay up-to-date and informed without relying on traditional forms of communication.

### VISUAL DAM

### DIGITAL ASSET MANAGEMENT

DAM provides simple system to manage your data with workflow automation & powerful search functionality.

Centralize all your essential text, audio, video & production files while maintaining complete control. The introduction of version control and revision history into your fashion enterprise helps to ensure that no important asset is ever lost or misused.

### VISUAL DOCM

### DOCUMENT MANAGEMENT

DOCM gives your team access to essential files and folders where and when they need them.

Our enterprise level document management system allows you to drag and drop files whilst controlling security access.

Back up your existing paper documents, using the OCR scanning capability and consolidate all your records.

### VISUAL SCM

### SUPPLY CHAIN MANAGEMENT

To help clients break down barriers of time and language with web-based solutions that improve communication and collaboration across the supply chain.

Visual SCM eliminates the complexity of managing production, delivery, and other activities regardless of the size of your vendor network.

### VISUAL BI

### BUSINESS INTELLIGENCE

Visual BI consolidates information from every aspect of the business and transforms it into easy to understand and actionable business intelligence.

Create professionally designed data displays and customized, user based report/dashboards on metrics for fashion critical KPI's

Supports virtually any data source and device agnostic - runs on Tablets, Phones,
Macs or PC's

### VISUAL RTS

### REAL-TIME SHOP FLOOR MONITORING

Increase productivity, gain transparency and enhance the quality of your production floor manufacturing process without any need for expensive proprietary hardware.

Track every detail from product to worker output in a fully traceable and transparent fashion. Let Visual RTS provide you and your management team with the tools required to refine your production and become more agile.

### VISUAL WMS

### WAREHOUSE MANAGEMENT

WMS is an advanced warehouse management solution that comprises a wide range of receiving, inventory management, order fulfillment, distribution and other tools that enable better control of this critical business process.

WMS utilizes Wi-Fi, including barcode scanners, mobile computers, Tablets or IPod's and wireless LANs to efficiently monitor the flow of products through the warehouse.

### VISUAL VIS

### VISUAL INTEGRATION

This utility will be used to help different software other than the Visual applications to communicate with one another.

It will help facilitate the task to build and bridge connectors from different platforms and help map them to the Visual applications suite.

## FEATURES IN DETAIL

#### PRODUCT MANAGEMENT

The product management module helps users define product creation. It allows for multi-parameters, size, color, dimensions, categories and an unlimited set of additional attributes. Completely searchable, product details are available on all reports and other software integrations. Create seasonality at color level as well as do SKU and Customer Product codes assignment.

### PROJECT MANAGEMENT

The production management application provides a unique and comprehensive suite of functions to manage all phases of work-in-process (WIP). Whether you are a manufacturer, importer or use domestic contractors, all stages of work-in-process can be tracked and reported. From the time a work order is issued and reported as finished, to the time it is received into the warehouse you have complete visibility.

Regardless of the complexity of your operations, an unlimited number of Production Cycles can be tracked and split into multiple stages. VisualERP tracks the information you need to maintain accurate records of all production activities and the associated costs for labour, overhead and materials. Manufacturing control includes allocation of customer orders, to cutting ticket, to dye lot and contractor control.

### **BILL-OF-MATERIAL CONTROLS**

The Bill-of-Material (BOM) module provides for the creation and maintenance of style bills-of-material, subassemblies and non-material costing. It is the basis for the standard cost system. It also provides the capability of estimating costs for proposed styles. This module interfaces to the WIP system for component requirements and costing for projections, planned and issued.

#### **MRP CAPABILITIES**

The MRP module defines the requirements of raw materials using timelines. With this tool production departments can forecast cash flow requirements at cost or selling price. The MRP module tracks raw materials as they move from requirement to an issued stage. Short/Over are dynamically calculated as production moves through different stages.

### **LOT COSTING**

The Lot Costing Module actualizes the production costs of each product as it enters into finished goods inventory. Lot Costing will pinpoint cost overruns incurred during a particular cycle as labor or materials components of work-in-process. An effective tool, whether you are a manufacturer, importer, or use domestic contractors for your process.

### **PURCHASE ORDER GENERATOR**

Generate Purchase Orders to your suppliers at the click of a button. Using the MRP Module, purchase orders for finished goods or raw materials are generated automatically. The buying department can track vessels using estimated time of departure or arrival. Late orders are tracked by the number of days late. Also includes receiving control for raw materials and finished goods as well as inventory control for finished goods and raw materials

#### PURCHASE ORDER ALLOCATION CONTROLS

Tracking of purchase orders for imports and distributors. User defined Work-in-process (WIP) stages. Ability to reschedule WIP. Assignment of cut start or completion date based upon standard lead times by process. Time phased cut & sold by user defined delivery periods.

### ORDER PROCESSING CONTROLS

UPC Codes are assigned at the SKU level in real time. Multiple vendor assignment capability pricing and packaging options available at the style level for production planning. Full distribution order and multi-store processing capabilities are included. Real time orders allow pick-slips to be generated in the distribution center.

### **BAR CODE MANAGEMENT**

UPC/EAN/SKU capabilities for all products, colors, & sizes. Labels, price tickets, hang tags for dozens of Major Retailers. Barcode line lists & catalogues. Multiple printer support.

### **ACCOUNTING**

The accounting module provides a comprehensive suite of applications that range from accounts receivable and accounts payable to general ledger. All aspects of our solution integrate to the general ledger, allowing the user to greatly reduce journal entries. Accounts receivable provides an auto cash option.

Customer checks are automatically assigned to open items and a real-time view of outstanding balances is also available. Scratch pad follow-up and credit evaluation are also key elements. Whether you purchase raw materials, office supplies, or finished products, the accounts payable module is integrated to the product procurement application.

### **GENERAL LEDGER CONTROLS**

The general ledger module provides control and analysis of the financial status of the company and all its reporting entities. General Ledger information is automatically received from other Visual 2000 modules. The General Ledger account numbers up to 25 positions and up to 13 accounting periods within the fiscal calendar. Current and last year budgets and online general ledger master file maintenance are also included.

On-line journal entry and update. Variance reporting against current budget and last year actual. Ability to Archive general ledger masters from year to year with balance forward capability. Ability to copy repetitive journal entries from period to period.

### **GENERAL LEDGER PROCESSING**

On-line journal entry and update. Variance reporting against current budget and last year actual. Ability to Archive general ledger masters from year to year with balance forward capability. Ability to copy repetitive journal entries from period to period.

### FINANCE STATISTICS

Check reconciliation by number and dollar amount. Multiple banks with detailed statistics. Period reports and audits. Three way match of invoice with purchase order and receipt. Complete audit trail.

### **ACCOUNTS PAYABLE / PURCHASE LEDGER**

The Accounts Payable module controls open accounts payable and cash disbursements on either an accrual or cash basis. It also handles: Creation of Vendor Related Information. Default general ledger distribution numbers attached to each vendor. Pay-to-Vendor assignment for each vendor. Vendor terms with discount calculation.

Credit Limit and Balance available on-line. On-line vendor maintenance, inquiry and statistics.

#### PAYMENT PROCESSING

Provides complete costing information. Includes all information regarding transportation function. Provides information on customs activities. Reports on duty, freight, and special handling by Country of Origin.

### **ACCOUNTS RECEIVABLE/SALES LEDGER MODULE**

The Accounts Receivable module enables your business to effectively manage accounts receivable assets. It also helps collect and apply cash more readily and efficiently while minimizing bad debts. Accounts can be handled on either an open item or balance-forward basis.

### **CASH APPLICATION**

Apply Cash by item, range of items, cash in advance, unapplied cash or multiple adjustments. Control of checks by batch and detail check level. On-line customer identification, invoice number or name. On-line cash application on simultaneous clients. Cash receipts journal with general ledger live update. Complete audit trail of processing.

### **IMPORT COSTING**

Calculate vendor discounts. Inquire open and/or paid items by vendor. Automatic or manual selection of payments by vendor or due date. Duplication of Bills and Checks into other periods. A single invoice distributed to multiple general ledger accounts. Partial payments made against individual invoices. On-line review of General Ledger account numbers from Accounts Payable. Invoice processing by currency while maintaining balance information in a base currency. Currency valuations at invoice time, payment time, and period end with general ledger Variances based on current exchange rates. Ability to associate invoice detail to specific checks. On-line check printing capabilities and On-line check register. Advance payment capability.
